iRINGTools 1.2.0 Upgrade Guide

Please read the entire guide before proceeding.

This guide should be used to re-install fresh releases of the iRINGTools 1.2.0 in preparation for March demonstrations.

1. Rename your existing iRINGWeb to iRINGWeb.backup.
2. Follow the iRINGTools Installation Guide for version 1.2.0 that accompanies the Release Notice for the fresh release.
    a. Instead of section 3.7 Configuring Reference Data Service do the following:
        i. Copy RefDataService\Web.config from your backup and replace the same file in your new iRINGWeb.
        ii. Copy RefDataService\XML\Repositories.xml from your backup and replace the same file in your new iRINGWeb.
    b. While completing section 4.9 Configuring the AdapterService do the following:
        i. If you were using a ProxyCredentialToken, instead of steps 3 and 4, copy your token from AdapterService\Web.config in your backup and paste it into your new AdapterService\Web.config file.
3. Modify Tools\DBDictionaryUtil.exe.config to correct ProjectName, ApplicationName, and DBDictionaryFilePath values.
4. Run Tools\DBDictionaryUtil.exe to configure NHibernate for your legacy database.
5. Now browse to the MappingEditor, and select your ProjectName and ApplicationName.
